SENIOR MOBILE APP BACKEND DEVELOPER (M/F)

We are…

SHÄRE GmbH (www.share-a-taxi.com), a tech-startup from Munich. SHÄRE develops the SHÄRE-a-Taxi – a new app in Germany that allows users to spontaneously share a taxi with fellow passengers to save cost and protect the environment.

SHÄRE was founded by the experienced Dr. Christoph Nedopil and Daniel Valenti in the summer of 2014.

We search …

Support in the development and programming of the backend and infrastructure of the SHÄREa-Taxi app – starting immediately. Particularly, we look for someone with

- Profound experience in Node.js and Backbone.js
- Great knowledge in Mongo DB (possibly other databases) and RESTful APIs
- Frontend experience (e.g. PhoneGap, iOS and/or Android)
- Clear and structured working style
- Very good English proficiency (German would be good, too)

Besides, the candidate should be confident, independent and creative to find ways to finish his tasks. After all, a startup is only as good as the people making it happen.

Your tasks…

- Development and implementation of backend-services for the SHÄRE-a-Taxi app
  - Travel-route optimization
  - Geo-tracking
  - External APIs
  - Various algorithms, e.g. for payment, pricing, statistics
- Further development of the SHÄRE services
- Management of external development teams

What we offer…

- The opportunity to be part of an idea that will change the way people use taxis
- The opportunity to belong to the first 10 employees of a promising startup
- A position with the responsibility to develop a high volume app
- A working environment with space to develop and learn
- Great compensation package including shares in the company (and hence direct participation in the success story you help to create)

Interested?

Please send your meaningful application to Christoph Nedopil and Ursula Jocham via jobs@shaere.me. We are looking forward to hear from you!
